

NOTICE TO OUR CUSTOMERS

NEW DINET OIL PUMP for Voith gearboxes

We would like to inform our Customers that the production process of the Oil Pump manufactured by Dinet has been completely reviewed in order to further improve the quality of the Pump.

Performance and **reliability** are the main features of the new Dinet Oil Pump.

As you all know, the Oil Pump **generates the necessary oil flow inside the gearbox for cooling the oil** through the Heat Exchanger. If the oil flow is not proper, the working temperature of the gearbox increases and the duration of all the inner components is dramatically reduced. Only strict clearances inside the pump guarantee the suitable oil flow but, at the same time, strict clearances can affect the pump reliability if all the parts are not geometrically controlled.

This is why the new Dinet Pump is particularly well-finished from the dimensional point of view.

The new Dinet pump is an excellent product, as our Customers will be able to ascertain, especially when compared with other non-original pumps available in the aftermarket.

The new Dinet Oil Pumps is fully produced in Italy.
